FRONT-END DEVELOPER INTERNSHIP REPORT

EscapeMob — IT Consultancy

Design, Development & Deployment of the Future Furnishing Industry B2B Corporate Website

A report submitted in partial fulfilment of the requirement
for the degree of B.Tech CSE, School of Computer Science & Engineering,
IILM University, Greater Noida, U.P.

STUDENT	Vedika Sood
ROLL NUMBER	CS-23411111
BATCH	2023 – 2027
INTERNSHIP PERIOD	02 June 2026 – 01 September 2026

OVERVIEW

What this report covers

01

Introduction

Internship context, host organization and client engagement

02

Client & Problem

Future Furnishing Industry profile and the issues to solve

03

Objectives & Scope

What the engagement set out to achieve, and its boundaries

04

Tech & Architecture

Stack, system design and component structure

05

Methodology

The iterative, client-feedback-driven workflow followed

06

Outcomes

Results delivered and skills gained

Introduction

A three-month, full-time Front-End Developer internship completed alongside B.Tech CSE coursework at IILM University, Greater Noida.

Source code publicly on GitHub:

- **Host organization**
EscapeMob — IT Consultancy Company
- **Role**
Front-End Developer Intern
- **Department**
Technology & Development
- **Reporting to**
CTO & Technical Team
- **Client project**
Future Furnishing Industry — B2B corporate website
- **Nature of work**
Designing, developing, debugging and maintaining an existing React codebase

Client profile

Future Furnishing Industry

B2B manufacturer & exporter operating from Sector 63, Noida, Uttar Pradesh, serving wholesale importers, retail furniture chains and industrial spray shops across the USA and EU.

DIVISION 01	DIVISION 02	DIVISION 03
Powder Coating Machines Heavy-duty manual & automatic booths, forced-air curing ovens, automated reciprocators and continuous conveyor plant lines.	Powder Coating Powder Thermosetting finishes — antique vein patterns, metallics, matte finishes, mixed shades and heat-sublimated wooden-grain textures.	Furniture Manufacturing “The Home Collection” — luxury dining, coffee and console tables and chairs with marble, glass and PVD vacuum-coated hardware.

Host — EscapeMob: IT Consultancy led by Mr. Rounit Kumar, Founder & CEO. Assigned the client project within its Technology & Development department.

Problem statement

The existing data-driven SPA — listing 50+ products across three divisions — suffered issues that reduced its effectiveness as a B2B lead-generation tool.

Duplicate product identifiers causing incorrect items to be highlighted or added to the inquiry bag

JSX rendering bugs affecting specific product and category views

A non-responsive header that failed to display contact details and social links on smaller screens

Missing colour-swatch images inside auto-generated, downloadable PDF/HTML catalogues

Outdated branding — logo placement and overlay position — inside the generated catalogue documents

Project objectives

01

Fix functional bugs

Resolve duplicate product IDs and JSX rendering errors in the React/TypeScript codebase

02

Responsive header

Ensure contact details and social icons render correctly on every screen size

03

Fix catalogue swatches

Diagnose and resolve missing colour-swatch images in the downloadable catalogue

04

Correct branding

Update logo text and overlay positioning in PDF/HTML catalogue exports via ReportLab

05

Support deployment

Maintain the live Vercel deployment with clear, professional client communication

06

Protect the codebase

Preserve GitHub as the authoritative source of truth throughout

Scope of the project

A maintaining / enhancing intern-developer role on an already-scaffolded application, spanning five user-facing pages plus a combined Trade Inquiry & Careers portal.

IN SCOPE

- Bug fixing across the existing codebase
- UI/UX enhancements to header, footer, social icons
- Catalogue / PDF branding corrections
- Responsive layout fixes
- Clear client-facing communication on deployment status and issue resolution
- All under EscapeMob's CTO & Technical Team supervision

OUT OF SCOPE

- Initial application scaffolding and ideation — completed prior to this engagement
- Backend server infrastructure and hosting account provisioning
- Procurement of product photography / video assets, supplied by the client

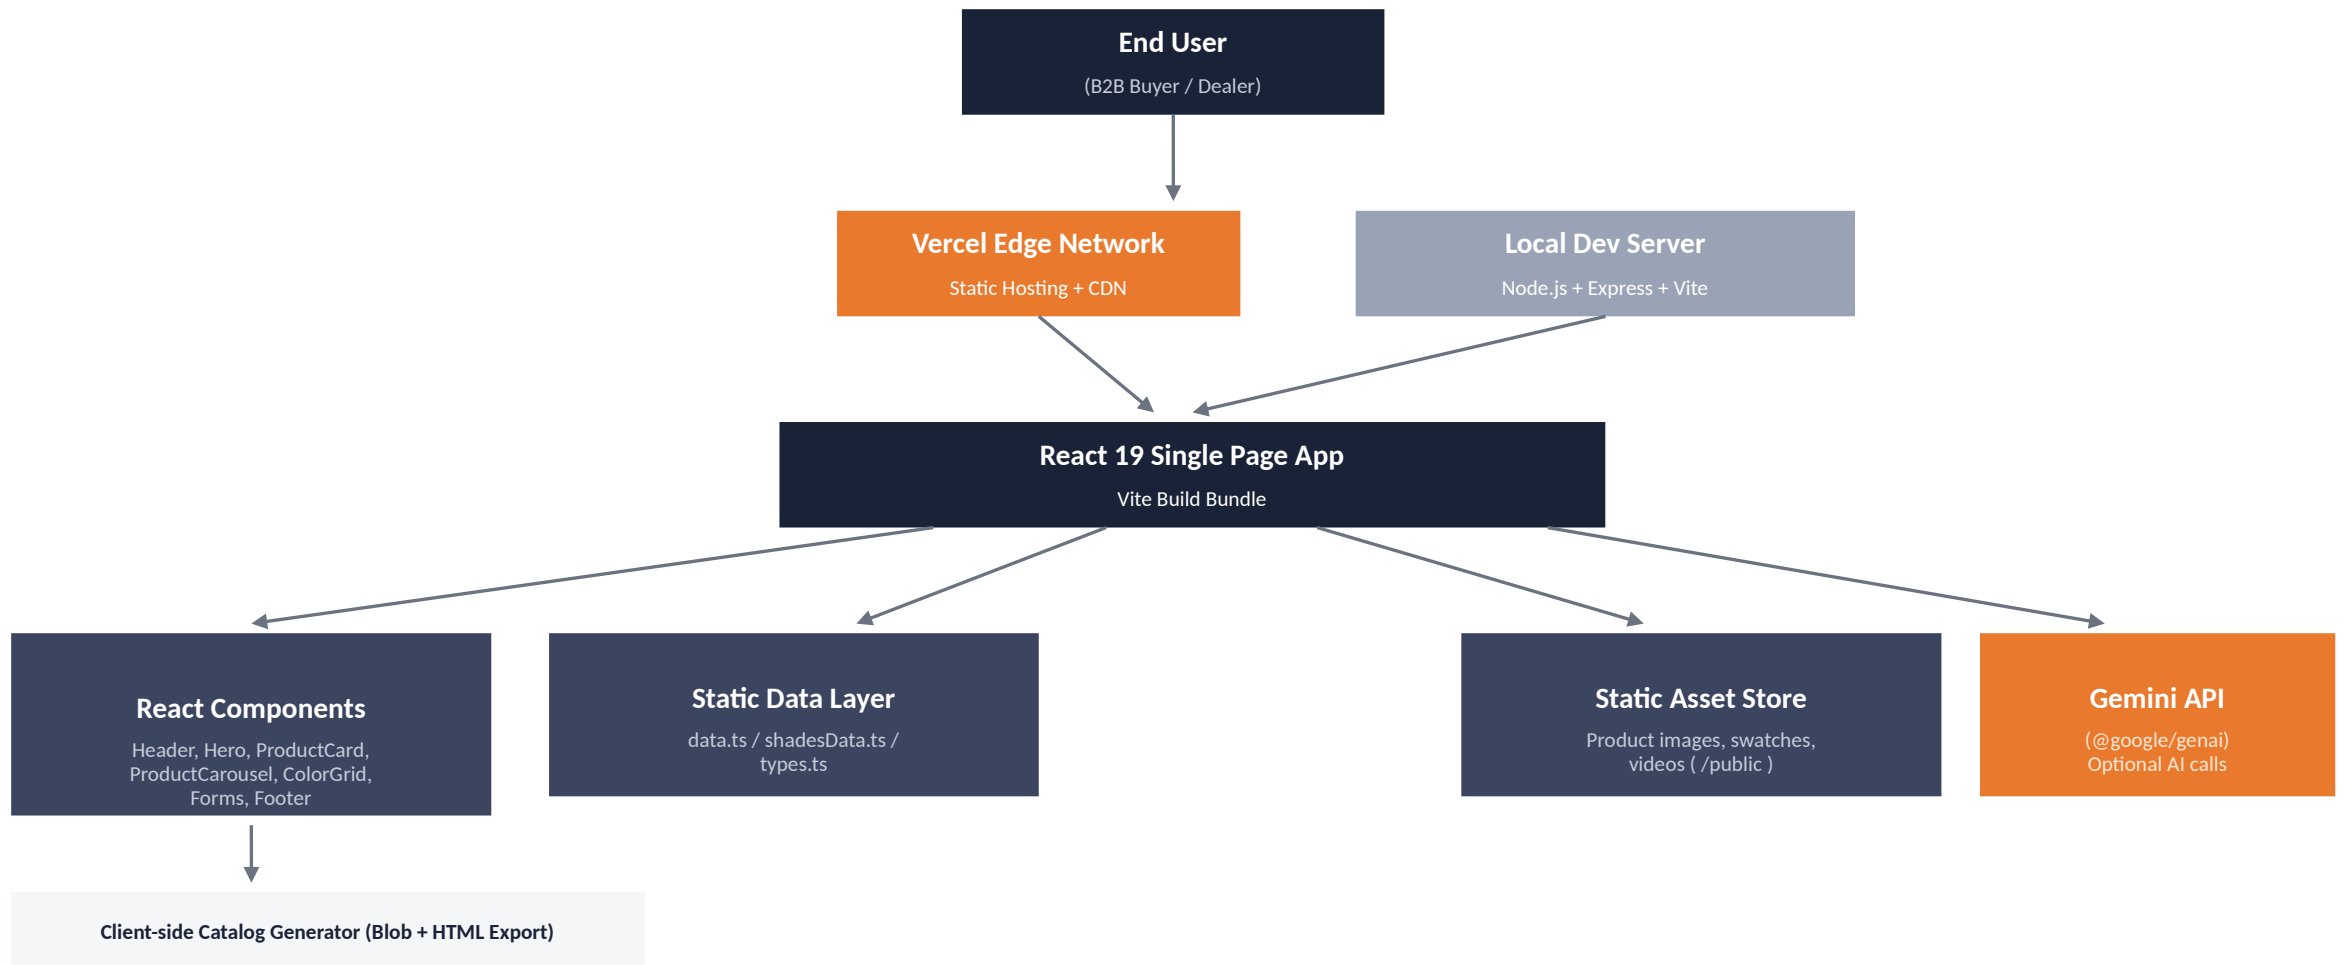

Application pages: Home • Company (About Us) • Powder Coating Machines • Powder Coating Powder • Furniture Manufacturing • Trade Inquiry & Careers

Technologies & tools used

FRONTEND LIBRARY React 19 Component-based UI rendering and state management	LANGUAGE TypeScript ~5.8 Static typing for product, inquiry and form data models	BUILD TOOL Vite 6 Development server and production bundling	STYLING Tailwind CSS 4 Utility-first responsive styling	ICONS Lucide React Consistent SVG icon set across the UI
ANIMATION Motion (Framer) Transitions and micro-interactions	AI INTEGRATION Gemini API Provisioned for AI-assisted content features	HOSTING Vercel Continuous deployment and static hosting	VERSION CONTROL Git & GitHub Canonical source-of-truth repository	PDF/BRANDING ReportLab (Python) Re-branding of downloadable catalogue assets

System architecture

A static, client-rendered SPA. The production build is served through Vercel's edge network; there is no application database — product, pricing and shade data lives in typed TypeScript modules.

Core React components

App.tsx acts as the root component and lightweight page router, conditionally rendering one of six page views based on a currentPage state variable.

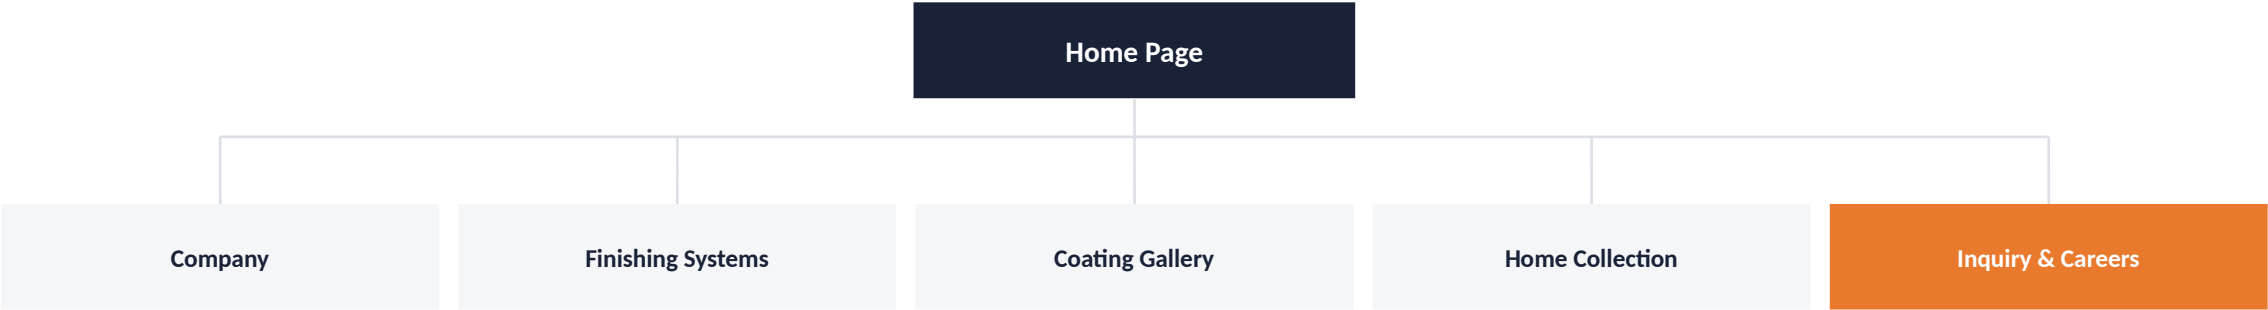

COMPONENT	RESPONSIBILITY
Header.tsx	Sticky nav bar, division links, theme toggle, inquiry-bag icon
Hero.tsx	Landing banner, headline, CTAs and catalogue download trigger
ProductCarousel.tsx	Animated “best seller” product slider on the home page
ProductCard.tsx	Reusable card rendering a product's image, specs and add-to-inquiry action
ColorGrid.tsx	Interactive grid for browsing powder-coating shades and wooden-grain finishes
StatsSection.tsx	Displays facility capacity statistics
Forms.tsx	Houses the Contact, Dealer Registration and Career forms
InquiryBag.tsx	Slide-out drawer listing products shortlisted for an RFQ
ImageZoomModal.tsx	Lightbox overlay for zooming into product and swatch images
Footer.tsx / WhatsAppButton.tsx	Site-wide footer links and floating WhatsApp shortcut

Development methodology

Since the application already existed, work followed an iterative, client-feedback-driven maintenance cycle rather than a conventional greenfield SDLC.

Navigation & product catalogue

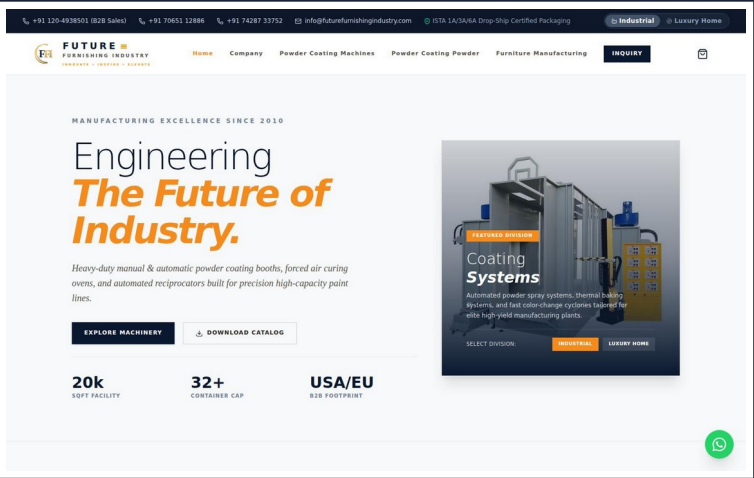

Division	Sub-categories	Items
Powder Coating Machines	Booths, curing ovens, conveyor plants, accessories	17
Powder Coating Powder	Antiques, metallics, matte, mixed & wooden shades	58 shades
Furniture Manufacturing	Dining sets, coffee/console tables, PVD-legged chairs	29

Over 50 products catalogued across three divisions at the time of this engagement.

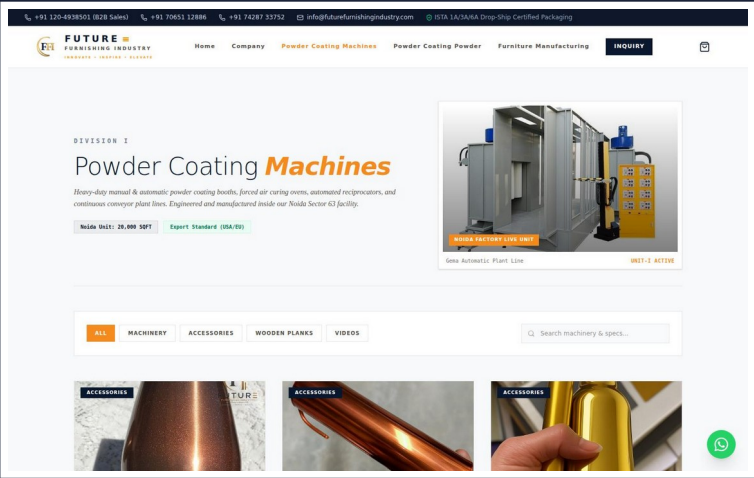

DEPLOYED APPLICATION

The site in production

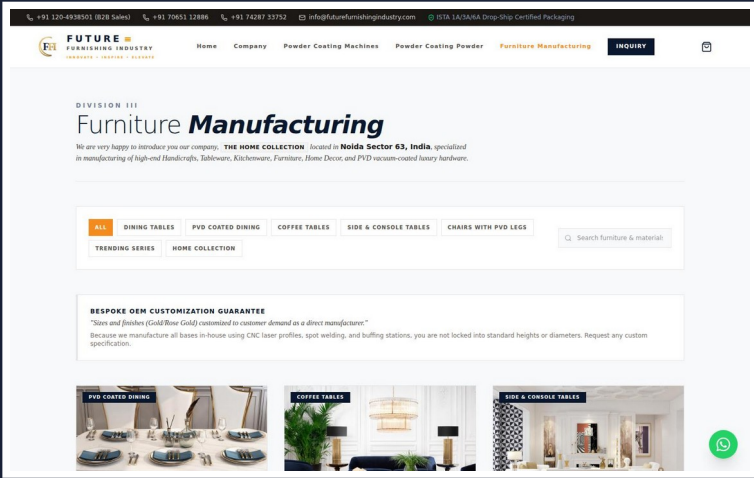

Homepage

Hero banner — “Engineering the Future of Industry” — with facility stats and a featured-division callout.

Powder Coating Machines

Division I page with filterable machinery, accessory and video categories, plus a search bar.

Furniture Manufacturing

Division III “Home Collection” page with a bespoke OEM customization guarantee.

Expected outcomes achieved

Duplicate product IDs identified and corrected — restoring accuracy of the inquiry bag and product highlighting

Site header made fully responsive across device sizes

Root cause of missing colour-swatch images in the PDF catalogue diagnosed and resolved

Catalogue / PDF branding corrected using ReportLab-based image editing

Vercel production deployment kept stable, GitHub maintained as single source of truth

Professional, clear written communication maintained with the client throughout

Skills strengthened

Through this engagement, in a real B2B software development context.

React / TypeScript debugging

Tailwind CSS styling

Vercel deployment workflows

Responsive UI development

Git-based version control

Professional client communication
