

Report
Of
**A Front-End Developer Internship Report on the
Design, Development and Deployment of the
Future Furnishing Industry B2B Corporate Website**

Submitted
To

**School of Computer Science and Engineering
IILM University, Greater Noida, U.P.**

In partial fulfilment of the requirement of degree of
B.Tech CSE

By

Roll Number of Student: CS-23411111

Name of Student: VEDIKA SOOD

Batch: 2023-2027

CANDIDATE'S DECLARATION

I, VEDIKA SOOD, do hereby declare that the internship report titled “A Front-End Developer Internship Report on the Design, Development and Deployment of the Future Furnishing Industry B2B Corporate Website” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature: _____

Student Name: VEDIKA SOOD

Roll No.: CS-23411111

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout my internship. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I would like to express my sincere gratitude to Mr. Rounit Kumar, Founder & CEO of EscapeMob, and to the CTO and Technical Team at EscapeMob, for the opportunity to intern as a Front-End Developer and for their guidance and mentorship throughout the internship, particularly on the Future Furnishing Industry client project. I am also thankful to the faculty of the School of Computer Science and Engineering, IILM University, Greater Noida, for their continuous academic support and encouragement.

I express my gratitude to my parents for their blessings.

Roll No.: CS-23411111

INTERNSHIP / PROJECT COMPLETION CERTIFICATE

This internship was completed as a three-month full-time Front-End Developer Internship with EscapeMob – IT Consultancy Company, from 02 June 2026 to 01 September 2026. The Experience & Internship Completion Letter issued by EscapeMob, certifying successful completion of the internship, is reproduced below.

EXPERIENCE & INTERNSHIP COMPLETION LETTER

Contact:

hello@escapemob.com

+91 9717504789

Date: 01 September 2026

To Whom It May Concern,

This is to certify that **Vedika Sood** successfully completed her three-month full-time internship as a Front-End Developer Intern with EscapeMob – IT Consultancy Company from **02 June 2026 to 01 September 2026**.

During her tenure, Vedika was part of the Technology & Development department and worked under the guidance of the CTO & Technical Team.

Her key responsibilities included:

- Developing responsive and user-friendly web interfaces.
- Converting UI/UX designs, wireframes, and prototypes into functional web pages.
- Working with HTML, CSS, JavaScript, and modern frontend frameworks.
- Ensuring cross-browser compatibility and mobile responsiveness.
- Optimizing website performance and user experience.
- Collaborating closely with backend developers, designers, and project managers.

- Debugging, testing, and maintaining frontend applications.

During the internship, Vedika gained hands-on experience working on real-world projects, along with exposure to modern web development tools and practices. She demonstrated creativity, technical skills, and a willingness to learn throughout her internship.

We appreciate her efforts and contribution during her association with EscapeMob and wish her all the very best for her future academic and professional career.

Warm Regards,

For EscapeMob,

 01/09/2026

Mr. Rounit Kumar

Founder & CEO EscapeMob

CHAPTER 4: PROJECT DESCRIPTION

4.1 Introduction

This report documents a three-month full-time internship completed alongside my B.Tech CSE coursework at IILM University, Greater Noida. I was selected as a Front-End Developer Intern with EscapeMob – an IT Consultancy Company – for the period 02 June 2026 to 01 September 2026, working within its Technology & Development department under the guidance of the CTO and Technical Team, as recorded in my Internship Offer Letter (Annexure I).

During this internship, I was assigned to work on a live client project: the corporate B2B (business-to-business) website of Future Furnishing Industry, a manufacturer and exporter of industrial powder coating machinery, powder coating finishes, and premium metal-and-wood furniture. My responsibilities on this project involved designing, developing, debugging and maintaining the client's existing React-based codebase.

The live application is hosted on Vercel, and the complete source code for the project is version-controlled and publicly available on GitHub at: <https://github.com/VEDIKASOOD/future-furnishing-industry>.

The purpose of this report is to present the problem addressed, the objectives of the work, the scope of my contribution, the technologies used, the system and component architecture of the application, the development methodology followed, and the outcomes achieved during this engagement. The Internship Completion Certificate issued by EscapeMob is presented in Chapter 3, and the Offer Letter and Letter of Recommendation are attached as Annexures I and II respectively.

4.2 Organization / Client Profile

Host Organization – EscapeMob (IT Consultancy Company): EscapeMob is the IT consultancy that hosted my internship, under the leadership of Mr. Rounit Kumar, Founder & CEO. As a Front-End Developer Intern in its Technology & Development department, I was assigned to client projects and reported to the CTO and Technical Team, in line with the terms recorded in the Internship Offer Letter (Annexure I).

Client Project – Future Furnishing Industry: The specific client project assigned to me during this internship was the corporate B2B website of Future Furnishing Industry, a

B2B manufacturing and export business operating from a manufacturing unit in Sector 63, Noida, Uttar Pradesh, India. As represented on its corporate website, the company operates across three core business divisions:

- Powder Coating Machines – heavy-duty manual and automatic powder coating booths, forced-air curing ovens, automated reciprocators and continuous conveyor plant lines.
- Powder Coating Powder – thermosetting powder coating finishes, including antique vein patterns, metallics, matte finishes, mixed shades and heat-sublimated wooden-grain finishes.
- Furniture Manufacturing (“The Home Collection”) – luxury dining tables, coffee tables, console tables and chairs featuring marble, glass and PVD (Physical Vapor Deposition) vacuum-coated metal hardware.

The company positions itself as an export-oriented manufacturer serving wholesale importers, retail furniture chains and industrial spray shops across the United States and the European Union, with an emphasis on ISTA-certified drop-ship packaging for damage-free international shipping.

4.3 Problem Statement

Prior to and during this engagement, the client's website — a data-driven single-page React application listing over fifty products across its three divisions — suffered from a number of functional and presentational issues that reduced its effectiveness as a B2B lead-generation tool. These included:

- Duplicate product identifiers in the product catalogue, which caused incorrect items to be highlighted or added to the on-site inquiry bag.
- JSX rendering bugs affecting specific product and category views.
- A non-responsive header that did not correctly display contact details and social media links on smaller screen sizes.
- Missing colour-swatch images inside the auto-generated, downloadable PDF/HTML product catalogues.
- Outdated branding (logo placement and overlay position) inside the generated catalogue documents.

There was, therefore, a need for a developer to systematically identify, reproduce and fix these defects, while also incrementally improving the site's usability, without disrupting the client's ongoing use of the live deployment.

4.4 Project Objectives

- To identify and fix functional bugs in the existing React/TypeScript codebase, including duplicate product IDs and JSX rendering errors.
- To make the site header fully responsive, ensuring contact details and social media icons render correctly on all screen sizes.
- To diagnose and resolve missing colour-swatch images inside the dynamically generated downloadable product catalogue.
- To update and correct the branding (logo text and overlay positioning) used inside the PDF/HTML catalogue exports, using ReportLab-based image processing.
- To maintain the live Vercel deployment and support the client with clear, professional written communication regarding project status and issue resolution.
- To preserve the integrity of the codebase on GitHub as the authoritative source of truth for the project at all times.

4.5 Scope of the Project

The scope of my contribution to this project was that of a maintaining/enhancing intern-developer on an already-scaffolded client application, rather than building the application from a blank slate. The scope specifically included:

- In scope: Bug fixing, UI/UX enhancements to existing components (header, footer, social icons), catalogue/PDF branding corrections, responsive layout fixes, and clear client-facing communication regarding deployment status and issue resolution, under the supervision of EscapeMob's CTO and Technical Team.
- Out of scope: Initial application scaffolding and ideation (already completed prior to my engagement), backend server infrastructure and hosting account

provisioning, and procurement of product photography/video assets (supplied by the client).

The application itself spans five user-facing pages/divisions — Home, Company (About Us), Powder Coating Machines (Finishing Systems), Powder Coating Powder (Coating Gallery), Furniture Manufacturing (Home Collection) — plus a combined Trade Inquiry and Careers portal, all built as a single-page application (SPA) with client-side routing implemented through React state.

4.6 Technologies and Tools Used

The application is built as a modern client-rendered single-page application. Table 4.1 summarizes the principal technologies and tools involved in the project, as observed in the project's package.json and source code.

Table 4.1: Technologies and Tools Used in the Project

Category	Technology / Tool	Purpose
Frontend Library	React 19	Component-based UI rendering and state management for the SPA.
Language	TypeScript ~5.8	Static typing for product, inquiry and form data models (types.ts).
Build Tool	Vite 6	Development server and production bundling.
Styling	Tailwind CSS 4	Utility-first responsive styling via @tailwindcss/vite plugin.
Icons	Lucide React	Consistent SVG icon set used across the UI.
Animation	Motion (Framer Motion)	Transition and micro-interaction animations.
AI Integration	@google/genai (Gemini API)	Provisioned for AI-assisted content features.
Local Server	Node.js, Express, dotenv	Local development server and environment configuration.
Hosting / Deployment	Vercel	Continuous deployment and static hosting of the production build.
Version Control	Git and GitHub	Source control and collaboration; canonical repository for the codebase.
PDF/Branding Tooling	ReportLab (Python)	Editing and re-branding of downloadable catalogue PDF assets.
Editor / Tooling	VS Code, npm	Day-to-day development environment and package management.

4.7 System Architecture

The application follows a static, client-rendered single-page-application architecture. The production build is a set of static assets (HTML, JS, CSS and media files) served through Vercel's edge network; there is no application database — product, pricing and shade data is defined directly in TypeScript data modules (data.ts, shadesData.ts) and typed via types.ts. Figure 4.1 illustrates the overall system architecture.

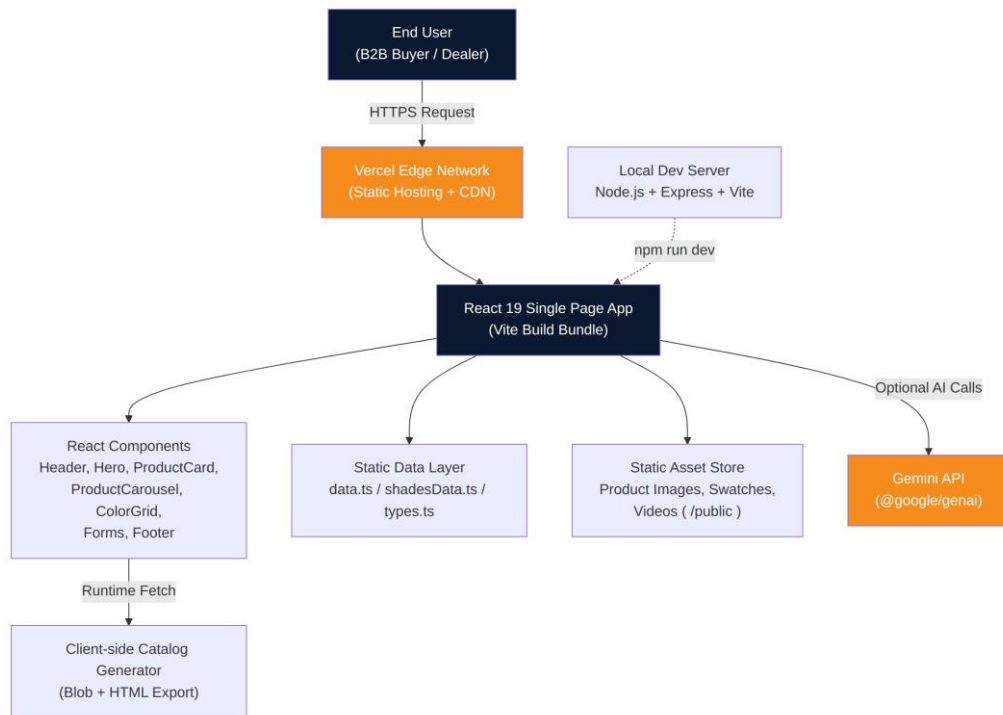

Figure 4.1: System Architecture of the Website

Within the React application itself, App.tsx acts as the root component and lightweight page router, conditionally rendering one of six page views based on a currentPage state variable. Figure 4.2 shows the component hierarchy, and Table 4.2 summarizes the responsibility of each principal component.

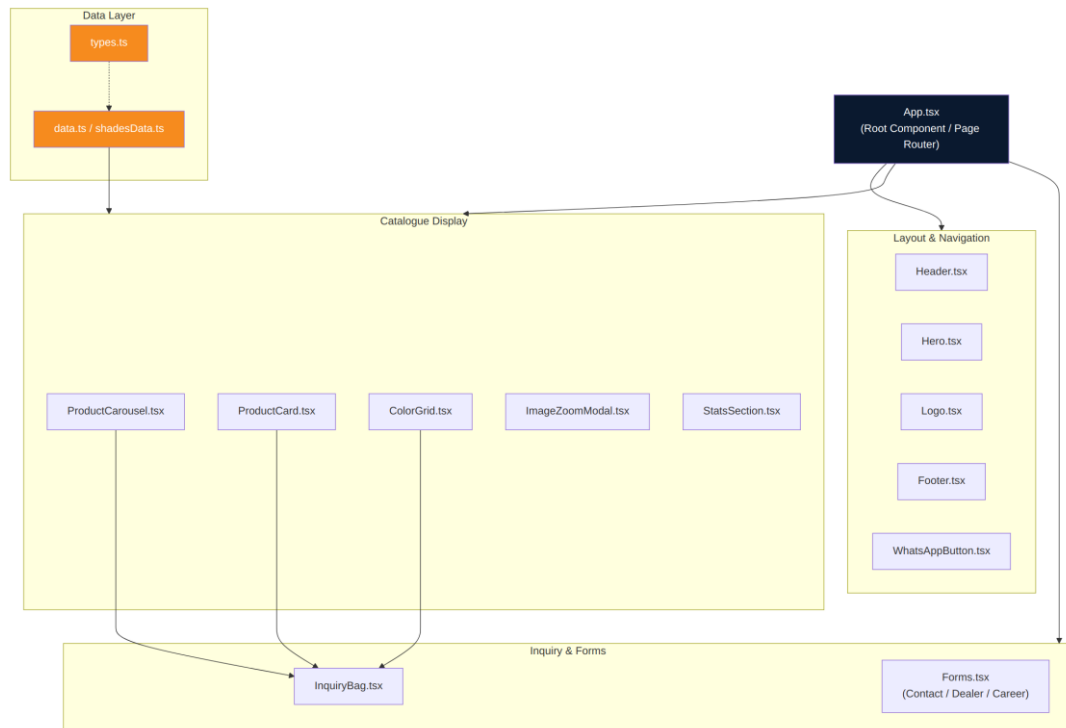

Figure 4.2: Component Hierarchy of the React Application

Table 4.2: Core React Components and Their Responsibilities

Component	Responsibility
Header.tsx	Sticky navigation bar, division links, industrial/luxury theme toggle and inquiry-bag icon.
Hero.tsx	Landing banner with headline, call-to-action buttons and catalogue download trigger.
ProductCarousel.tsx	Animated “best seller” product slider on the home page.
ProductCard.tsx	Reusable card used to render an individual product's image, specs and add-to-inquiry action.
ColorGrid.tsx	Interactive grid for browsing powder-coating colour shades and wooden-grain finishes.
StatsSection.tsx	Displays facility capacity statistics (e.g. factory area, container capacity).
Forms.tsx	Houses the ContactForm, DealerRegistrationForm and CareerForm used on the Inquiry portal.
InquiryBag.tsx	Slide-out drawer listing products a visitor has shortlisted for an RFQ.
ImageZoomModal.tsx	Lightbox overlay for zooming into product and swatch images.
Footer.tsx / WhatsAppButton.tsx	Site-wide footer links and a floating WhatsApp contact shortcut.

4.8 Methodology

Since the application already existed when I joined the project, the development methodology followed an iterative, client-feedback-driven maintenance cycle rather

than a conventional greenfield SDLC. Figure 4.3 depicts the workflow followed for each round of work.

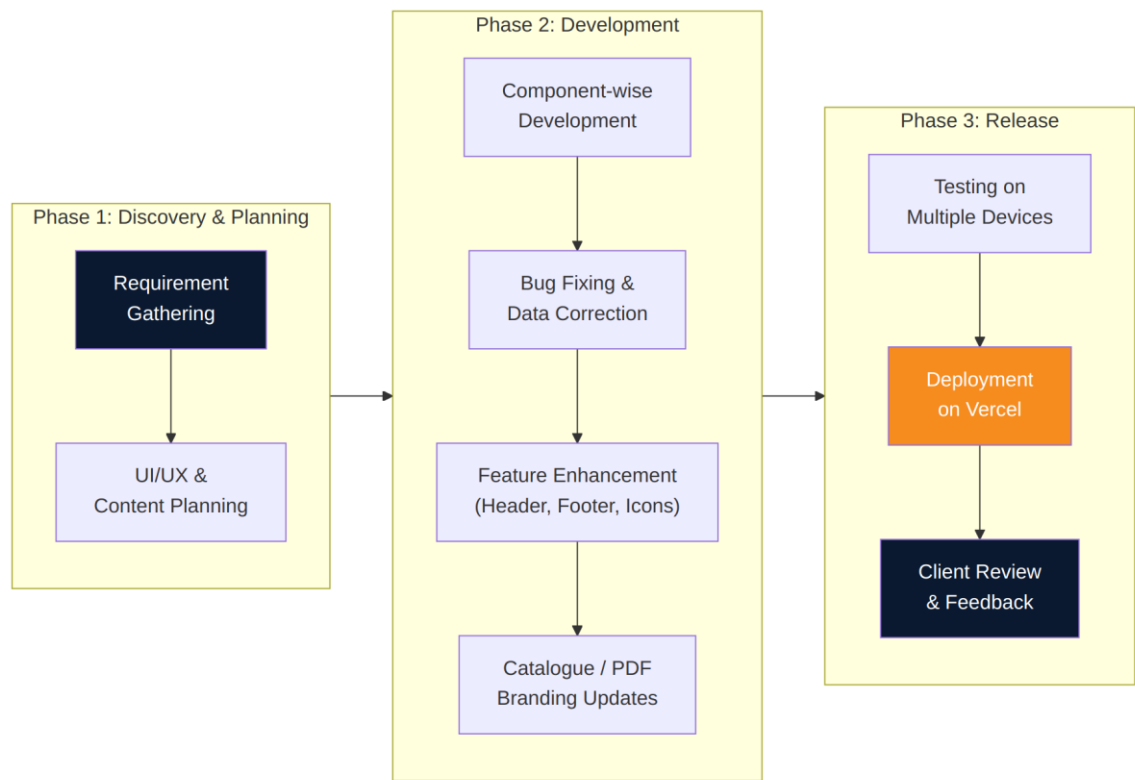

Figure 4.3: Development Methodology Workflow

Each iteration began with the client (or my own testing) reporting a defect or requesting an enhancement. I would reproduce the issue locally using the Vite development server, isolate the affected component or data entry, apply and test a fix, and then verify the change against the production build before requesting a deployment update on Vercel. Change requests arising from client review were fed back into the next round of requirement gathering.

The site itself is organized as a small set of divisions/pages, navigable from the home page as shown in the sitemap in Figure 4.4. Table 4.3 summarizes the product categories present in the catalogue at the time of this engagement.

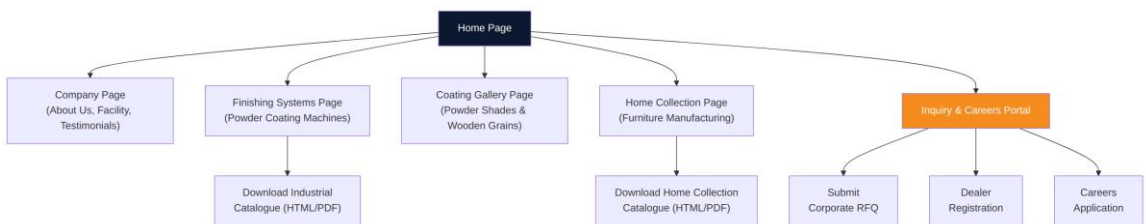

Figure 4.4: Site Navigation Map (Sitemap)

Table 4.3: Product Categories Featured on the Website

Division	Representative Sub-Categories	Approx. Items Catalogued
Powder Coating Machines	Booths, curing ovens, conveyor plants, accessories	17
Powder Coating Powder	Antiques, metallics, matte, mixed and wooden shades	58 shade swatches
Furniture Manufacturing	Dining sets, coffee/console tables, PVD-legged chairs	29

Figures 4.5, 4.6 and 4.7 show the deployed application's Home page and two divisional pages respectively, captured from a locally-served production-equivalent build of the reviewed codebase.

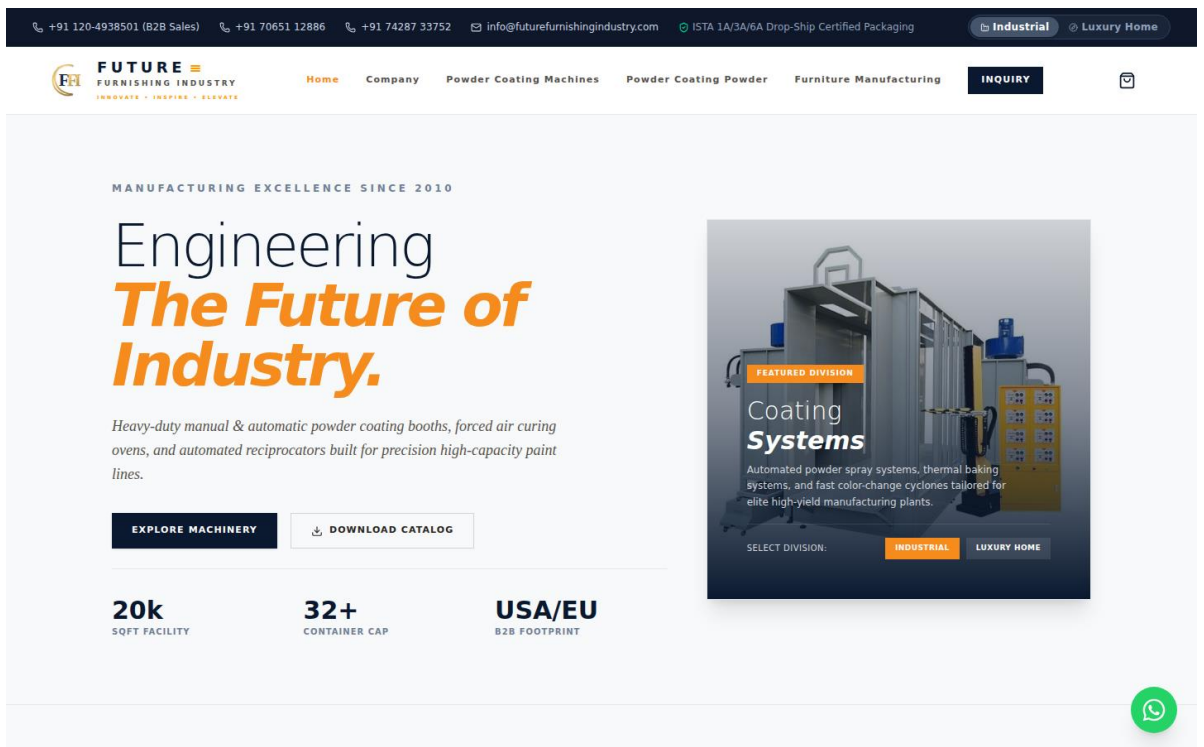

Figure 4.5: Homepage of the Deployed Website

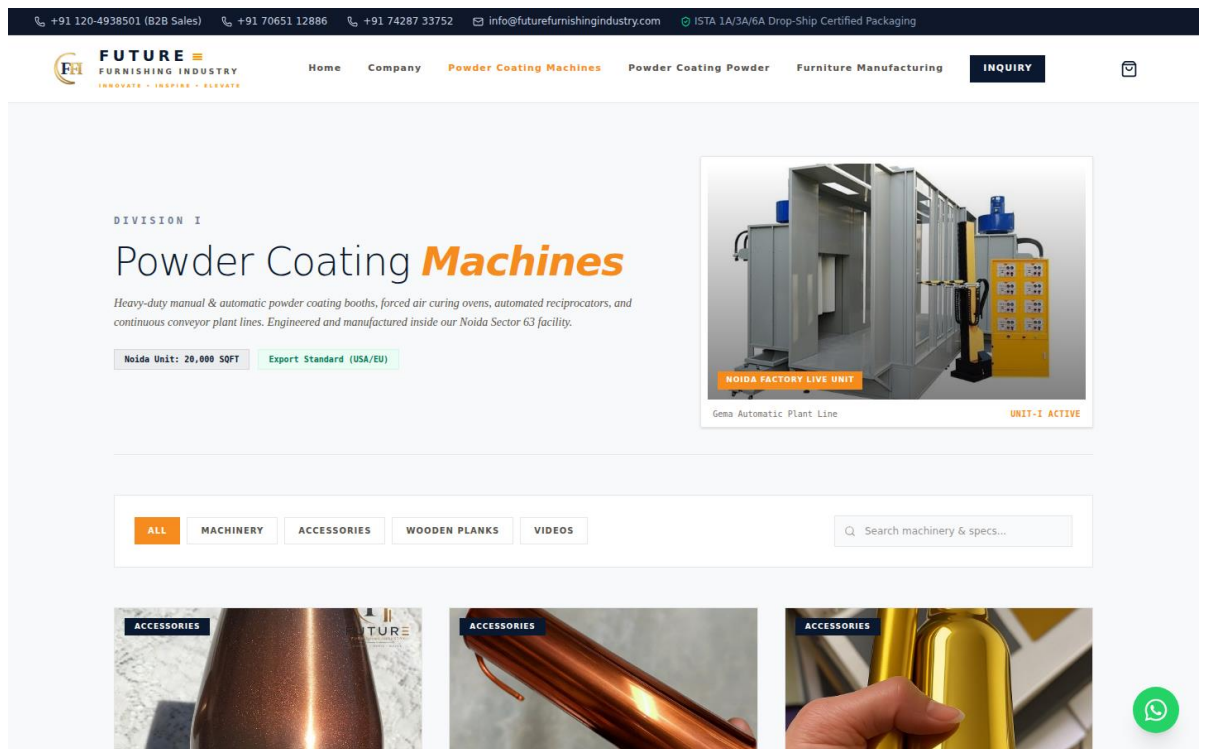

Figure 4.6: Powder Coating Machines (Division I) Page

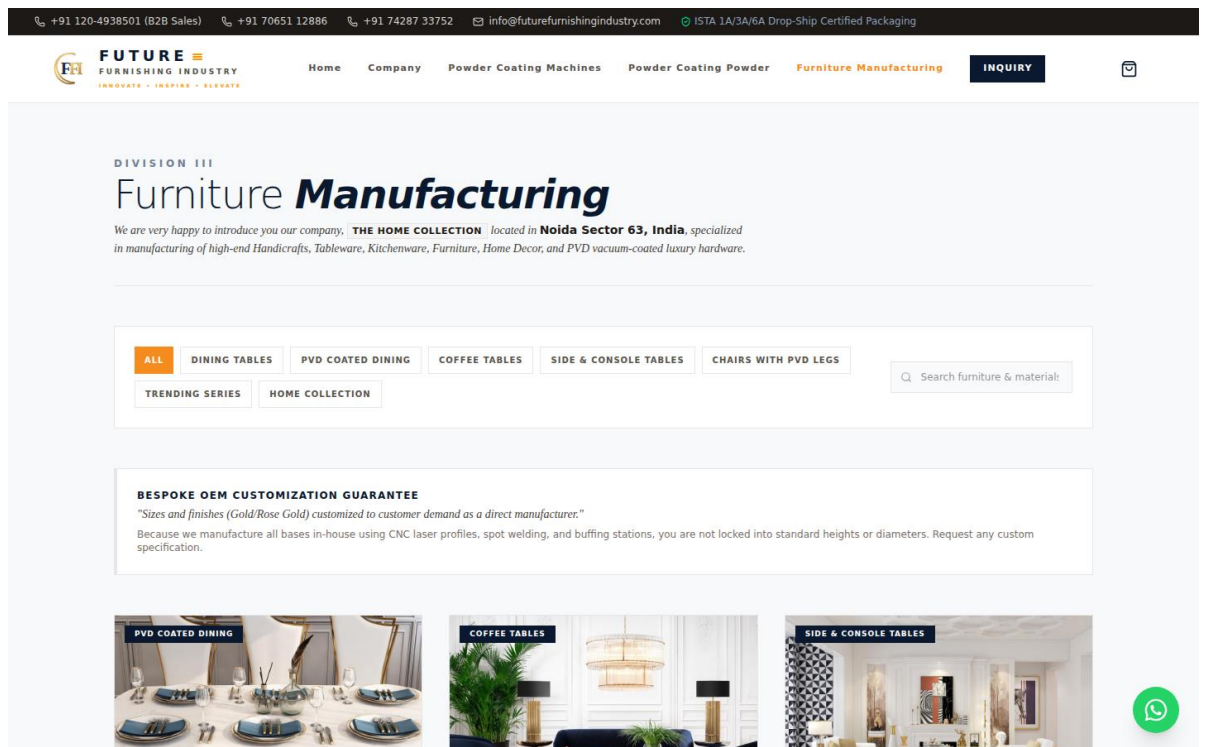

Figure 4.7: Furniture Manufacturing – The Home Collection (Division III) Page

4.9 Expected Outcomes

By the conclusion of this engagement, the following outcomes were achieved:

- Duplicate product IDs were identified and corrected, restoring accuracy of the on-site inquiry bag and product highlighting.
- The site header was made fully responsive, correctly displaying contact numbers and social media icons across device sizes.
- The root cause of missing colour-swatch images in the downloadable PDF catalogue was diagnosed and resolved.
- The catalogue/PDF branding (logo text and overlay position) was corrected using ReportLab-based image editing.
- The Vercel production deployment was kept stable and available, with the GitHub repository maintained as the single source of truth for the codebase throughout.
- Professional, clear written communication was maintained with the client regarding project status, issue resolution and deployment management.

Overall, the engagement strengthened my practical skills in React/TypeScript debugging, responsive UI development, Tailwind CSS styling, Git-based version control, Vercel deployment workflows, and professional client communication in a real B2B software development context.

4.10 Certificates of Completion and Other Communication Mail Proof

The Internship Completion Certificate issued by EscapeMob upon successful completion of this internship is presented in full in Chapter 3 of this report. In further support of this engagement, the original Internship Offer Letter and the Letter of Recommendation issued by EscapeMob are attached as Annexure I and Annexure II respectively, immediately following the Bibliography/References section of this report.

Internship Offer Letter

Contact :
hello@escapemob.com
+91 9717504789

Date: 28 May 2026

To,
Vedika Sood

Subject: Offer of Internship – Front-End Developer | EscapeMob

Dear Vedika,

We are pleased to inform you that, following a review of your application and discussions with our team, you have been selected for the position of **Front-End Developer Intern** at **EscapeMob**.

We are confident that your creativity, technical skills, and passion for web development will contribute significantly to our projects and team.

Internship Details

Particulars	Details
Position	Front-End Developer Intern
Department	Technology & Development
Internship Type	Full-Time
Duration	3 Months
Commencement Date	02 June 2026
End Date	01 September 2026
Reporting To	CTO & Technical Team

Stipend	₹10,000 per month
Mode	Offline
Location	EscapeMob Office

Roles & Responsibilities

During your internship, you will be expected to:

- Develop responsive and user-friendly web interfaces.
- Convert UI/UX designs, wireframes, and prototypes into functional web pages.
- Work with HTML, CSS, JavaScript, and modern frontend frameworks.
- Ensure cross-browser compatibility and mobile responsiveness.
- Optimize website performance and user experience.
- Collaborate closely with backend developers, designers, and project managers.
- Debug, test, and maintain frontend applications.

What You Will Gain

- Hands-on experience working on real-world projects.
- Mentorship from experienced professionals.
- Exposure to modern web development tools and practices.
- Internship Completion Certificate upon successful completion.
- Letter of Recommendation based on performance.
- Opportunity for a full-time role based on performance and company requirements.

Terms & Conditions

1. This internship is valid for a period of three (3) months from the joining date.
2. The stipend will be credited on or before the 7th day of each month.
3. The intern is expected to maintain professional conduct and adhere to company policies.
4. All source code, designs, documentation, and project assets developed during the internship shall remain the exclusive intellectual property of EscapeMob.
5. The intern must maintain strict confidentiality regarding company, client, and project information.
6. Either party may terminate the internship by providing 7 days' written notice.
7. EscapeMob reserves the right to terminate the internship immediately in cases of misconduct, policy violations, or breach of confidentiality.

Acceptance

If you accept this offer, please sign and return a copy of this letter.

We are excited to welcome you to EscapeMob and look forward to your contributions.

Warm Regards,

For EscapeMob

Baibhav Aryan Raj
Chief Managing Officer
EscapeMob

Acknowledgement & Acceptance

I, **Vedika Sood**, hereby accept the offer of internship as a **Front-End Developer Intern** at EscapeMob and agree to abide by the terms and conditions stated above.

Signature: _____

Date: _____

ANNEXURE II: LETTER OF RECOMMENDATION

The following pages reproduce the original Letter of Recommendation issued by Mr. Rounit Kumar, Founder & CEO, EscapeMob, dated 01 September 2026, on the successful completion of my internship.

EscapeMob – IT Consultancy Company

GSTIN: 10NFSPK4023R1ZT

LETTER OF RECOMMENDATION

Contact:

hello@escapemob.com
+91 9717504789

Date: 01 September 2026

To Whom It May Concern,

It is my pleasure to recommend Vedika Sood, who successfully completed a three-month full-time internship as a Front-End Developer Intern at **EscapeMob** from 02 June 2026 to 01 September 2026.

During her internship with our Technology & Development team, Vedika worked on developing responsive and user-friendly web interfaces. She converted UI/UX designs, wireframes, and prototypes into functional web pages and worked with HTML, CSS, JavaScript, and modern frontend frameworks.

Vedika also contributed to ensuring cross-browser compatibility and mobile responsiveness, optimizing website performance and user experience, and collaborating closely with backend developers, designers, and project managers.

She was involved in debugging, testing, and maintaining frontend applications. Throughout her internship, she demonstrated creativity, technical skills, and a genuine passion for web development, while maintaining professional conduct and adhering to company practices.

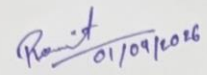

We believe that the practical experience and exposure to modern web development tools and practices gained during her internship will serve her well in her future academic and professional

pursuits. We are pleased to recommend Vedika Sood for opportunities in the field of Front-End Development and Web Development.

We wish her continued success in her future endeavors.

Warm Regards,

For EscapeMob,

A handwritten signature in blue ink, appearing to read 'Rounit', followed by the date '01/09/2016' written in a similar style.

Mr. Rounit Kumar

Founder & CEO EscapeMob
